Opening **DOORS** to the future

One DOOR,

Infinite possibilities

When you choose Whole Block, you get an innovative door that combines design, practicality and sustainability. Our commitment to excellence is exemplified in every detail, from intuitive design to top-quality materials.

Whole Block is the smart choice for professionals looking for a comprehensive door solution.

Our door can be summed up in a world of advantages:

- ✓ Delivered fully finished from the factory, which means that **no in-situ cutting or drilling is required.**
- ✓ Trouble-free storage. **A single door covers all market needs**, thus ensuring greater product rotation.
- ✓ **It provides an impermeability of 100% moisture resistance** of the materials in direct contact with the floor (**jamb, swing change device and frame**). **Impervious to fungi and insects.** Hydroframe® system
- ✓ **Adapts to any standardised partition-wall thickness** and also to the different **35-40-45 door thicknesses** with or without noise-reduction strips.
- ✓ Enables left or right-hand door swing to be decided **at the same time as installation, with or without thumb-turn lock**, as desired.
- ✓ No heavy power tools or qualified personnel required for installation. **Anyone can install it in less than fifteen minutes.**
- ✓ **Does not require prior placement of a wooden pre-frame** if you prefer to save the cost.
- ✓ Whole Block fosters environmental sustainability. The raw material used to manufacture the jambs, swing change devices and frames is based on a **100% recycled and recyclable** polymer.
- ✓ Fast, clean installation **without brads or nails**, ensuring a higher-quality finish.

"Whole Block gives you endless versatility"

Impermeability.

100% moisture-resistant

The jamb, frame and the swing change device - all of which rest on the floor and may come into direct contact with moisture (by mopping floors, for example) - are 100% moisture-resistant.

They are made of robust materials and extremely high-quality bonding products.

Hydro-Frame[®]
TECHNOLOGY

With **HYDROFRAME[®]**
technology

We invite you to open the door

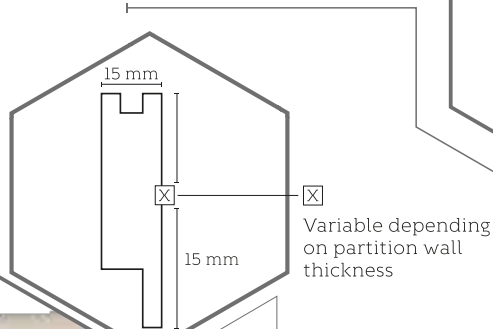

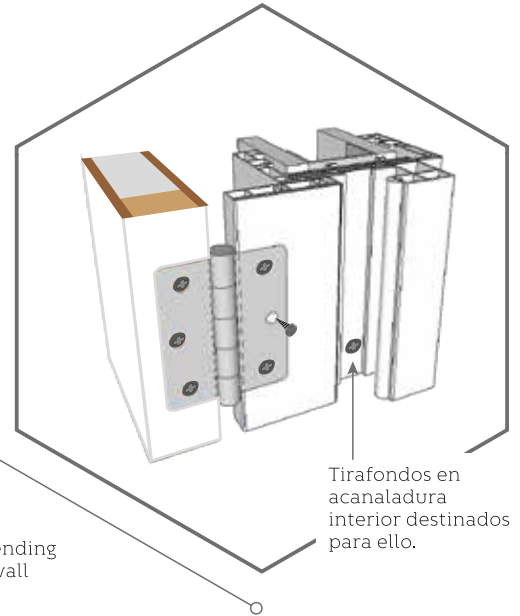

to the Whole Block revolution

The Whole Block door is much more than a mere door; it is a statement of intent to drive **innovation, practicality and sustainability**. Designed for ease of use and adaptability, the Whole Block door provides you with greater control and options that no other door has ever given you.

Our goal is to transform the door sector by providing a solution as easy to install as it is to use. You not only benefit from **superior design** and unprecedented practicality; by using Whole Block you also contribute to a **more sustainable future**.

Perfect fit on the partition without brads or nails

Frame supplement

Designed to adapt to different partition thicknesses

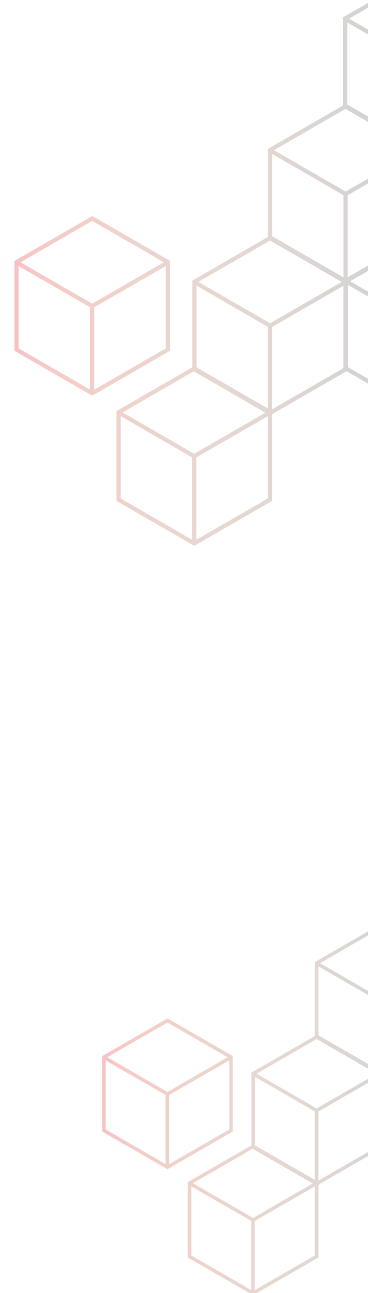

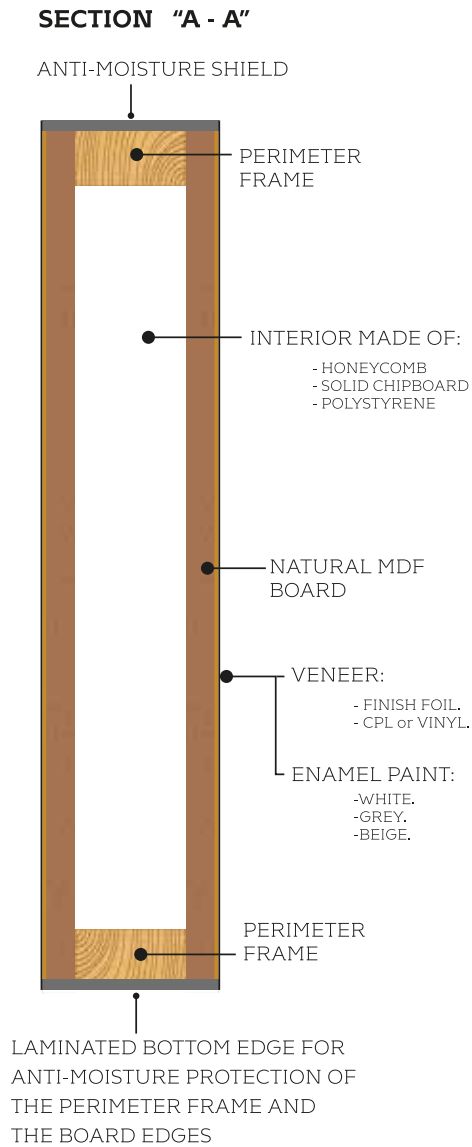

With Whole Block, you are selecting a door that adapts to your needs, your home and your world. You are choosing **quality, innovation and sustainability**. You are choosing Whole Block, the revolution at the door.

PERFECTION in every manufacturing DETAIL.

and cross-section

DOOR LEAF

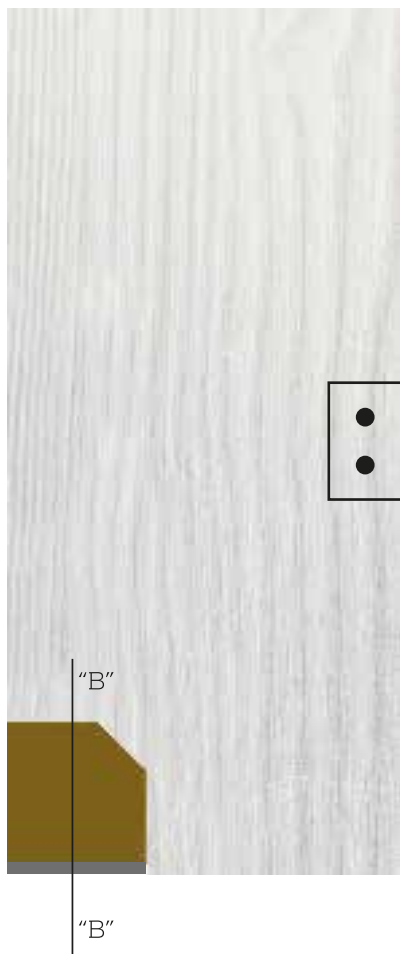

All our door leaves have two holes drilled in the leaf for the handles, their strike plates and the thumb-turn lock.

The materials used to manufacture the door leaf are not hygroscopic, and although the bottom edges are raised 5 mm above the floor and are not in direct contact with the moisture like the jamb, cladding and frame, they can absorb moisture through the bottom edge when the floor is mopped, for example. The bottom edges of our doors are lined with a **highly moisture-resistant** material.

Innovation in every part

Door frame

Similar to the jamb in design, the frame is adjustable and fits the partition thickness exactly, ensuring a perfect installation.

"Each **Whole Block** component is testimony to our commitment to **innovation and quality.**"

Door leaf

To ensure simple, trouble-free installation, each leaf is equipped with three hinges, a lock and two holes for the doorhandle and the thumb-turn lock..

Jamb

Our door jamb - made up of a hinge jamb, a latch jamb and a head jamb - also provides perfect integration as cladding for the inside of the partition.

Swing change device

Recessed and secured with its hinges and strike plate to facilitate right or left swing, as desired.

con *Whole Block*

The Whole Block door allows you to choose the swing direction at the last minute during in-situ assembly. **We provide clear instructions for changing the swing direction from right to left** including handle rotation of the lock and its latch bolt.

The entire process is quick, easy and does not require qualified personnel

The cladding on both sides of the partition wall is 17 mm thick in order to highlight the design of the door and provide the perfect finish for the 10-, 12- and 15-mm-thick toeboard.

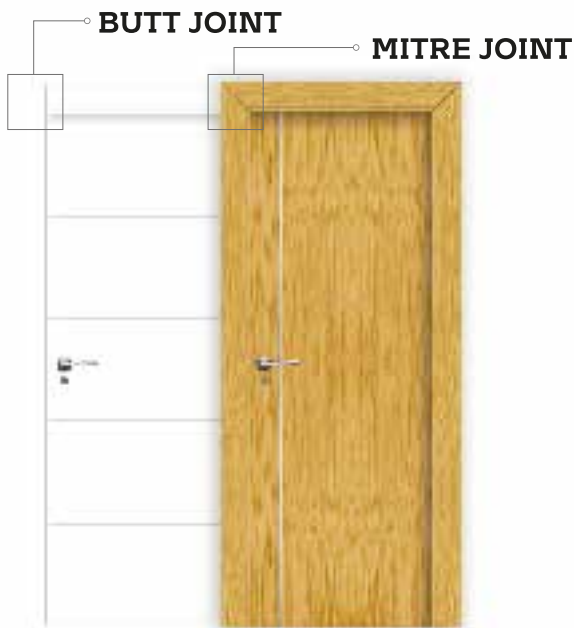

Together for a sustainable future:

Committed to a green future

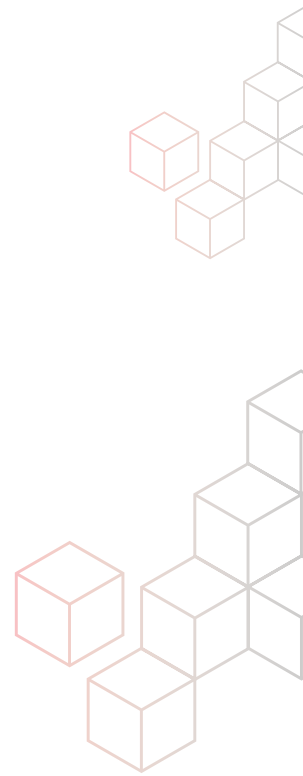

Whole Block is committed to environmental sustainability. Our doors are made of high-quality materials that respect the environment. This commitment is extended to the entire production process from raw material selection to assembly of the finished product.

Customised solutions

We provide a **wide range of finishes and styles** from elegant enamels through CPL and vinyl laminates to flat or textured designs and aluminium friezes because here at **Whole Block** we understand that each project has different needs. We also provide solutions for joining the side and head jambs and the frame using mitre or butt joints and several soundproofing processes.

Open the door to change with Whole Block

With Whole Block you can expect more than a mere door. Expect practicality, versatility, sustainability and a design that adapts to your needs.

Redefining productivity

Whole Block installation redefines efficiency while saving time, effort and costs for all stakeholders. We provide a product that boosts your productivity and profitability with a design that ensures quick, clean, simple installation.

1 Minimum effort, maximum performance:

Our easy-to-install system can be assembled in less than fifteen minutes, reducing assembly time by 75% **without requiring the use of heavy power tools or specialised personnel.** You can install it yourself.

2 Versatility and adaptability in each installation:

Our doors provide greater flexibility to all projects because they are designed so that a **35/40/45-mm-thick door leaf, with or without seal strip, can be installed in a single door unit** with built-in capacity to **adapt to the thickness of the desired partition.** You can also leave the decision between **left and right-hand swing with or without thumb-turn lock** until the very last moment before installation.

3 Higher quality of final finish:

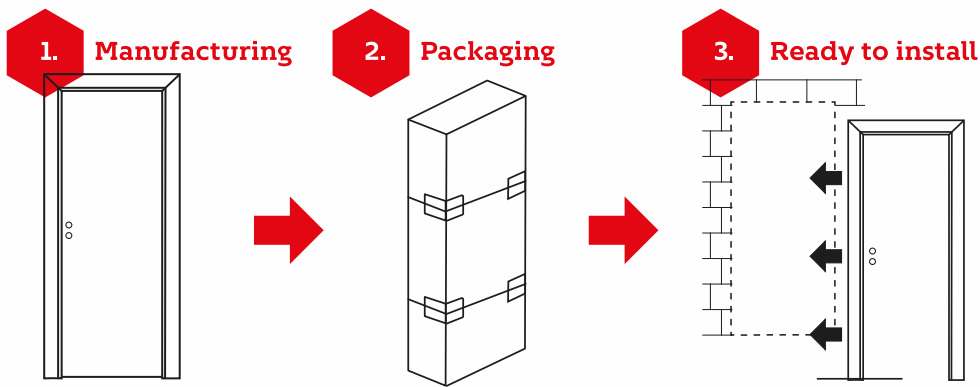

Installed **without brads or nails.**

Installing our door is more than a process: it's a strategic investment that enhances your productivity.

Each Whole Block installation is a testimony to efficiency.

Optimised in each delivery

We know that efficiency is a key aspect of every project. Here at Whole Block, **every door we supply is FULLY FINISHED, packaged and ready to install**, thus simplifying the logistics and facilitating storage. We also provide a convenient kit format for the international market. Each delivery of a Whole Block door is synonymous with optimisation and profitability for our customers.
